2024 RETA National Conference to be held this month

The 2024 RETA National Conference will be held October 21-24 at the Gaylord Texan Resort in Grapevine, Texas. The 4-day event will feature hands-on training, workshops, technical presentations, networking events, and an expansive exhibit hall. The conference will cover a wide range of topics for professional development of industrial refrigeration operators and technicians. Logic Technologies Inc. will be in attendance at the show and invite you to visit us at booth 322. We will be there to provide information about our control systems and would love to speak with you and answer any questions you might have. We hope to see you there!

Training Information and Schedule

Training Enrollment

LOGIC Technologies, Inc. conducts in-depth training sessions at our facility on a monthly basis. Two free sessions are included with each system purchased. Additional training sessions are available for a nominal fee. Operator training sessions are \$1045 per person and advanced training sessions are \$1045 per person. We provide lunch for each class day; however, all other travel expenses are your responsibility.

Operator- Level Sessions

This class session provides overview coverage of the use of our system to maintain the daily operations of a refrigerated facility. The class is conducted by one of our senior engineers who have many years of experience designing refrigeration control systems. In effect, the classes are taught in layman's terms by someone who fully understands the issues faced by refrigeration operators.

Operator Level November 13-15
Operator Level December 11-13

Advanced SST Sessions

This class session provides in-depth coverage of the screen and report development tools. Also, briefly covering the script language used to develop control algorithms. These classes are conducted by senior members of our engineering staff. Prior technical and basic programming knowledge is a prerequisite for this course.

To Be Announced

* Seating is limited, make your reservations early by contacting:

Breast Cancer Awareness

October is Breast Cancer Awareness Month. This is a time for reflection on trends in breast cancer research, prevention, and treatment. According to the National Cancer Institute, approximately 310,720 women in the United States will be diagnosed with breast cancer in 2024. Furthermore, about 42,250 will die of the disease.

Breast cancer is the most common type of non-skin cancer in women in the United States. It also accounts for 30% of all new cancer cases in women. It is second only to lung cancer as a cause of cancer death in American women. About one woman in eight in the United States will develop breast cancer during her lifetime – which equals about 13% of all women.

Like most cancers, the risk of breast cancer increases with age. Additional risk factors include exposure to estrogen made by the body; presence of dense breast tissue; early onset of menstruation; older age at first birth; the use of hormones for symptoms of menopause; smoking; obesity; and not getting enough exercise.

Women at average risk who are over the age of 40 are encouraged to get regular mammograms. Early detection and treatment are vitally important to surviving breast cancer.

The 2023 RETA National Convention offered classes on a variety of topics in the refrigeration industry as well as exhibits of the latest products.
